The issue you're experiencing is due to a recent change in AWS CodeCommit's service policy. According to an official AWS response: As of June 6, 2024, AWS CodeCommit has stopped onboarding new customers. Only customers with existing repositories in AWS CodeCommit can create additional repositories.

This change doesn't affect current workloads using AWS CodeCommit. If you need to use AWS CodeCommit in a new AWS account within your AWS Organization, you can request an evaluation for allowlisting the new account.

For alternatives, AWS recommends using Amazon CodeCatalyst, GitLab, GitHub, or another third-party source provider. AWS has provided a blog post describing how to migrate your repository to these solutions.

AWS will continue to invest in security, availability, and performance improvements for CodeCommit and provide support, but they don't plan to introduce new features except for security and availability updates.

If you still need to use CodeCommit, you can submit a support case to request allowlisting, providing justification and confirming that your organization was a CodeCommit customer before July 25, 2024.

(This response was translated using AI. Credit and thanks to user @omar-tarek for providing the reference link: post)
